OBJECTIVE

Software Engineer and final-year AI Software Engineering student at WeThinkCode_, also enrolled in the ALX Africa Data Analytics programme, with 2+ years of hands-on full-stack and mobile development experience. Strong problem-solving skills in Python and Java, and experience with Docker, GitLab CI/CD pipelines and software deployment. Freelance developer delivering client websites. I also have gained experience in TDD.

EDUCATION

WeThinkCode – Final Year Software Engineering Student
ALX Africa – Data Analytics Program

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS

Databases: MySQL, Database Design & Management (CRUD, queries, normalization)

Tools & Platforms: Git & GitHub, Linux CLI, Android Studio (basic)

DevOps & Tools: Docker, Gitlab CI/CD pipelines, Git & GitHub, Linux CLI, Android Studio (basic)

Concepts: Systems Design, OOP, Data structures and algorithms, Version Control Workflows, REST basics

Other: Business Ethics, Team Collaboration, Problem Solving

PROJECTS

AOG Manager: Church Management Desktop App | Electron, Firebase Authentication, Firebase SQL Connect (PostgreSQL)

- Built an Electron desktop app for managing church members, serving teams and service attendance, with search, team filtering and full member record management. I used Copilot to build and deploy my application.
- Designed a relational PostgreSQL schema (organizations, members, teams, services, attendance) with a composite key that prevents duplicate attendance.
- Implemented multi-organization support with Firebase Authentication and server-side role-based access (ADMIN, TEAM_LEAD); built transactional, retry-safe attendance recording that updates member totals.

Google Api Calendar | *Python · Google API*

- As a team Engineered an automated booking pipeline utilizing the Google Calendar API to streamline peer-to-peer mentoring session coordination.
- In the project I Implemented secure client-side user authentication and resource authorization protocols using OAuth 2.0 workflows.
- In the project I also Integrated real-time conflict prevention by querying the API to eliminate session double-bookings.

Royal Square Financial App — *AfriHackathon project*

Client dashboard, reminders, and goal-tracking system for a brokerage and financial services provider.

- As team we Built an Android client app in Kotlin alongside a companion admin web app
- I designed a real-time client dashboard showing financial position and net worth
- We Implemented automated reminders for tasks, documents, renewals, and reviews

EXPERIENCE

Da Silva Flooring & Construction — Company Website — *Freelance Developer*

- Built and maintain a multi-page business website, including a filterable portfolio gallery
- Carried out a full site audit and bug fixes, and rebuilt the site footer
